William Virgil Wolff

IT Director / Systems Engineer

St. John, Indiana · virgil@tyco.sh
github.com/CaptainVirgil · linkedin.com/in/CaptainVirgil · credly.com/users/CaptainVirgil

IT director and systems engineer with 12 years across networking, identity, physical security and infrastructure as code. Run a 4-person IT department for a multi-entity company: own the network, a Proxmox HA cluster and the M365 tenant, and ship internal software in Go and Laravel. Hands-on at every layer, from terminating fiber to writing the automation.

EXPERIENCE

Director of IT and Innovation

Grid-Line Transportation, Inc. · Schererville, IN · Dec 2025 – present

- Lead a 4-person IT department (data analyst, full-stack developer, Tier 1 technician) for a 5-entity trucking group; hired and ramped the technician on a 90-day plan and five SOPs; launched an in-house service desk now used by every department head.
- Primary maintainer and tie-breaker on a from-scratch transportation management system built with two other engineers (Laravel 13, Livewire 4, PostgreSQL 18, Octane, Horizon; 4,484 commits, 67 ADRs), in production beta since July 2026; solo-built the service desk and a QUIC remote-management tool (FastAPI, Go, React).
- Built a 4-node Proxmox VE 9 HA cluster (2x R740xd, 2 NUC quorum nodes) with ZFS replication at a 5-15 minute RPO, proven on a real unplanned node fence; consolidated the legacy system from 4 chassis to 2 VMs, retiring 3 chassis and recovering 192 GB of RAM.
- Redesigned the network on 2x UDM Pro Max: 11 VLANs under zone-based policy (275 rules), WireGuard site and client VPN, PowerDNS primary with two secondaries and split-horizon DNS, iDRAC and cellular WAN2 for out-of-band access; every firewall, DNS or hypervisor change carries a rollback point and two independent admin paths.
- Owner's technical representative on a $1.4M HQ build-out: specified 87 Cat6 and 12 Cat6A drops, 12 Wi-Fi 7 APs, 19 cameras and 28 door readers before the walls closed; ran the low-voltage bid ($56.5K over $69K and $99K) and the 1 Gbps dedicated-fiber carrier bid; lighting design in DIALux, 121 fixtures.
- Hardened the Microsoft 365 tenant: Global Admins 8 to 4, Intune and ASR conflicts to zero, 12 over-privileged Graph apps audited, former-MSP agents and AV removed fleet-wide, Bitwarden org rebuilt to least privilege, 11-secret credential rotation with zero lockouts.
- Stood up a self-hosted platform (Vaultwarden, n8n, DocuSeal, Uptime Kuma, NetBox, MeshCentral with Azure-signed agents) behind Caddy and Entra SSO, a Warpgate bastion in place of Teleport, GitOps deploys with drift detection on a 20-runner CI fleet, and nightly offsite backups with restore drills.
- Root-caused a silent 18-30% loss of driver load acceptances to a domain controller running 16 seconds ahead of NIST; after external NTP the loss went to zero. Nine n8n watches (~18K runs/month) now catch dispatch and assignment failures before drivers do.
- Vendor decisions with real money: DocuSign to DocuSeal ($2.6K to ~$320/yr), Quo to Teams Phone on Telnyx direct routing (39 numbers to 3), Front to M365 (144 inboxes, 198 rules), lighting package renegotiated for a $30K material credit.

Systems Engineer IV

Team Solutions Group, LLC · Santa Barbara, CA · Nov 2024 – Dec 2025

- First week: led ransomware recovery at Marmol Radziner (architects, 3 offices, every machine encrypted); regained domain control by booting Linux over iDRAC to reset a domain admin, led the wipe and rebuild of every workstation; staff working in a week, 40 TB restored in two.
- Hardened it afterward (EDR, BitLocker, MFA, firewall) against the likely entry: a SonicWall VPN flaw, then an outside admin without MFA.
- Donaldson (architects, 80 people, 3 offices): M365 E3/E5 down to Business Premium across a split M365/Google estate; benchmarked Core Ultra 7, 128 GB, RTX 4080 workstations for a firm-wide 3D-modeling refresh; scoped Proxmox to replace three Hyper-V hosts.
- Project lead for a statewide CAL FIRE land-mobile-radio deployment (10 sites, 12 radios) and a 300+ room network overhaul (22 APs) at Best Western Plus, hitting compliance and uptime targets.
- Built secure network and server environments for four Santa Barbara hotels (Brisas del Mar, Lemon Tree Inn, two Best Westerns): Microsoft 365, Azure, hybrid Active Directory and AD migrations, Intune and Jamf across Windows and macOS, VLANs, site-to-site VPNs.
- Led identity projects for MSP clients (AD migrations, MFA rollouts, Global Admin audits) and mentored 5 junior engineers and service desk technicians; automated onboarding and offboarding in PowerShell.

IT Technician

Acelyrin, Inc. · Agoura Hills, CA · Oct 2022 – Aug 2024

- Supported 180 users at a HIPAA-regulated biopharma (Entra ID with PIM just-in-time admin access, Microsoft 365 E3, Intune for 180 devices, Autopilot, Defender for Endpoint, 4 Zoom Rooms) at ~3-4 tickets/day.
- Deployed 802.1X (EAP-TLS, Intune device certificates) for the managed fleet; ran HR-driven onboarding and offboarding with PowerShell Azure-vs-BambooHR identity reconciliation, plus SharePoint and Egnyte migrations.
- Built Python API integrations to keep MATLAB data pipelines available to research analysts on demand.

Operations Manager

SR Technologies · Ventura, CA · Aug 2020 – Oct 2022

- Managed 200+ network sites (~2/3 UniFi behind FortiGate firewalls) across hotels, theaters, warehouses and residential properties, including macOS and Windows support; led 5 direct reports and up to 6 outside low/high-voltage and general contractors.
- Main point of contact for the largest client, Herbl, a California cannabis distributor (3 sites, 300+ computers, 500+ endpoints): Avigilon cameras and access control for the buildings and a ~50-vehicle delivery fleet on Cradlepoint, built to state cannabis retention rules.
- Supported Herbl's SAP Business One integrations and user access, and the Zebra label printers behind state track-and-trace.
- Delivered full-stack IT renovation of the post-acquisition La Quinta Inn by Wyndham (Santa Barbara): 1 MDF, 4 IDFs, 300+ guest rooms, bistro, back-of-house, multiple IP/vendor handoffs and servers, with end-to-end coordination across all trades.
- Maintained 200+ access-control endpoints (strikes, maglocks) and CCTV/NVR systems on Verkada, UniFi, and Avigilon across all sites.

Cell Tower Technician III

Ericsson · Ventura, CA · Nov 2018 – May 2020

- Serviced ~100 of 150+ cell towers from Malibu to San Luis Obispo; 1,000+ Cat5e/6/6e and coaxial terminations.
- Administered CDMA, LTE, and 5G networks; installed multi-band antennas (800 MHz, 1900 MHz, 2.5 GHz) and managed Cisco, Juniper, and Lucent routers plus DAS/oDAS systems.

IT Manager

Sabrent · Moorpark, CA · Jan 2017 – Oct 2018

- Managed 5 direct reports supporting a 50-person office, resolving ~7 tickets/day with sub-1-hour average response time.
- Improved product reliability by leading firmware-update rollouts and investigating RMA returns to surface and resolve recurring quality issues.

Contracted Network Analyst

NASO Corporation · Ventura, CA · 2014 – 2017

- Maintained IT and network for an aerospace/medical/defense electronics manufacturer under AS9100D and ISO 13485 compliance.
- Cut operational costs by retiring legacy network gear and right-sizing infrastructure for the manufacturing and engineering staff.

PROJECTS

Homelab

6-node RKE2 cluster (3 control plane, 3 workers) plus a 5-node Pi k3s cluster; every service declared in git and deployed by Argo CD; OPNsense and UniFi with WireGuard, VictoriaMetrics telemetry and alert rules, restic backups; full security audit, 78 findings closed.

RKE2 · k3s · Argo CD · OPNsense · VictoriaMetrics

Roost github.com/CaptainVirgil/roostv2

Solo-built game-server panel, rewritten from Elixir/Phoenix LiveView (709 tests) into one Go binary (22k lines, 236 tests); systemd and D-Bus own the processes, the daemon runs unprivileged; 5 servers live.

Go · SQLite · systemd · D-Bus

tyco.sh github.com/CaptainVirgil/tyco-sh

Go dashboard over UniFi and OPNsense telemetry (unpoller, VictoriaMetrics), iDRAC Redfish and game-server query ports (131 tests); public Cloudflare Workers site that only receives outbound snapshots.

Go · TypeScript · Cloudflare Workers · VictoriaMetrics

CERTIFICATIONS

CompTIA A+ · CompTIA Network+ · CompTIA Security+ · CompTIA Secure Infrastructure Specialist (CSIS) · CompTIA IT Operations Specialist (CIOS) · Fire Controlman (E-3)

SKILLS

Network & Routing: UniFi (Wi-Fi 7), Cisco (ASA/ISE/Catalyst), Meraki, Fortinet, OPNsense, BGP, OSPF, QoS, VLAN, WireGuard, PowerDNS, Cloudflare, LTE/5G, DAS, fiber/Cat6, structured cabling

Server & Virtualization: Linux (Arch, Debian, Ubuntu), macOS, Windows Server, Proxmox VE 9 (HA, ZFS replication), VMware vSphere, Hyper-V, Dell PowerEdge, iDRAC/Redfish

Cloud & Identity: Entra ID, Intune, Jamf, Conditional Access, PIM, Defender, Graph API, M365, Google Workspace, Azure, AWS, GCP, Active Directory (migrations), Okta, Duo, Bitwarden, SSO (SAML, OIDC), JML, LDAP, GPO

Security & Compliance: PKI, 802.1X (EAP-TLS), IPsec, SIEM, IDS/IPS, EDR (Defender, CrowdStrike), BitLocker, Zero Trust, Cloudflare WAF, access control and video (Avigilon, Verkada, UniFi), HIPAA, PCI, SOX, NIST, ITIL

DevOps & Automation: Docker Compose, Komodo GitOps, Kubernetes (RKE2, k3s), Argo CD, Terraform, Packer, Ansible, GitHub Actions, CI/CD, Git, Go, Bash, PowerShell, Python, n8n

Software & Web Architecture: Laravel and Livewire (TALL), PHP, Go, Python (FastAPI), React, REST APIs, NGINX, Caddy, ADRs

Databases & Data: PostgreSQL, SQL Server, MySQL/MariaDB, Redis, SQLite

ITSM, SaaS & Monitoring: ServiceNow, Jira, Freshservice, ConnectWise, Exchange Online, SharePoint, Teams Phone, Slack, Zoom, Zoom Rooms, Grafana, Uptime Kuma, SNMP
